Abstracts

Surgical support robots are advanced computer-assisted systems designed to enhance the precision, dexterity, and visualization capabilities of surgeons during minimally invasive procedures, often incorporating features such as magnified 3D high-definition vision, tremor filtration, and articulated instruments that mimic and scale the surgeon's hand movements with greater range of motion than the human hand. These systems are not autonomous but are operated by surgeons from a console, functioning as an extension of the surgical team to improve outcomes in complex operations such as prostatectomies, hysterectomies, and cardiac valve repairs by minimizing tissue trauma, reducing blood loss, and shortening recovery times.

The global Surgical Support Robot market size was estimated at USD 5200.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 12.50% during the forecast period.
