### Report Overview:

A surgical torque limiter, also known as a surgical torque wrench or a torque-limiting device, is a medical instrument used in surgical procedures, particularly in orthopedic surgery and dental surgery. Its primary purpose is to precisely control and limit the amount of torque applied when fastening screws, bolts, or other implantable devices to ensure that they are secured at the correct level of tightness. This is critical in surgical settings to avoid over-tightening, which could damage bone or other tissues, and under-tightening, which could lead to implant instability.
