Report Overview

A Surgical Tourniquet Machine is a medical device used during surgeries to control blood flow to a limb. By applying pressure to a specific area, the machine temporarily stops blood circulation, allowing surgeons to operate in a bloodless field. This controlled application of pressure is crucial for procedures like limb amputations or orthopedic surgeries, where it reduces blood loss and improves visibility for the surgeon. The machine typically features adjustable settings for pressure and duration, ensuring the tourniquet is applied safely and effectively without causing tissue damage.
