Abstracts

Surround View ADAS cameras are multi-camera systems integrated into vehicles to provide a 360-degree, bird's-eye view of the vehicle's surroundings, primarily assisting drivers during low-speed maneuvers like parking, reversing, or navigating tight spaces. These systems typically consist of four wide-angle cameras mounted on the front grille, side mirrors, and rear that capture real-time footage, which is then processed and stitched together by an electronic control unit (ECU) to create a composite top-down image displayed on the infotainment screen. Advanced versions incorporate object detection, trajectory prediction, and augmented reality overlays to highlight obstacles, curbs, or pedestrians, enhancing both safety and convenience. As a critical component of modern Advanced Driver Assistance Systems (ADAS), these cameras support semi-autonomous driving functions by providing comprehensive environmental awareness, reducing blind spots, and helping prevent collisions. The technology relies on high-resolution sensors, sophisticated image processing algorithms, and seamless integration with other ADAS modules such as parking assist and automated braking systems.

The global Surround View Adas Camera market size was estimated at USD 1260.45 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 12.80% during the forecast period.
