Report Overview

Surveillance robots are used to assist human guards in the defense and civil sectors. While human guards find it challenging to cover large territories and in assessing dangerous areas, surveillance robots, in the form of unmanned aerial vehicles (UAVs), unmanned ground vehicles (UGVs), and unmanned marine vehicles (UMVs), are increasingly being adopted. Surveillance robots are able to capture images and videos and save them for a minimum of two weeks.

The rising demand for autonomous systems in security and surveillance and the increasing adoption of smart security and surveillance appliances is expected to drive the growth of security robots market. The market for cloud robotics is anticipated to expand at a CAGR of 8.9% during the forecast period from 2017 to 2023. The global security robots market is anticipated to reach US\$ 3,881.4 Mn till 2023. There has been a considerable concern for safety aspect throughout the world. Smart security systems installed into huge commercial applications and also deployed into residential as well as other indoor applications addresses this concern. However, high total cost of ownership of security robot systems is restraining the growth of the market to some extent. On the other hand, some of the problems faced presently by the security industry are lack of training, high turnover, and low wages. To address this concern, companies are deploying security robots which is creating high growth opportunities for the growth of security robots market.
