Report Overview

The SUS (Single Use System) for biopharma processes refers to disposable equipment and components used in biopharmaceutical manufacturing, replacing traditional stainless-steel systems. These systems include bioreactors, mixers, filtration assemblies, tubing, and connectors designed for single-use applications, minimizing cross-contamination risks and reducing cleaning validation requirements. SUS enhances operational efficiency by eliminating time-consuming sterilization processes and enabling faster batch turnover, making it particularly valuable in flexible, small-batch production and personalized medicine. Its adoption aligns with industry trends toward modular and portable biomanufacturing solutions, driven by cost savings, scalability, and regulatory compliance. The growing demand for biologics, vaccines, and cell/gene therapies further accelerates SUS adoption, though challenges like extractables/leachables and environmental sustainability concerns persist.

The global SUS Single Use System for Biopharma Process market size was estimated at USD 5533.62 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 19.59% during the forecast period.
