Abstracts

Sustainable Cold Chain Packaging refers to an environmentally friendly packaging system designed to maintain the temperature control environment required for products (such as food, medicine, and biologics) during low-temperature logistics. Its core lies in replacing traditional plastics and foams with renewable, degradable, or recyclable materials, combined with energy-saving cold storage technologies such as phase change materials (PCM), to achieve precise temperature control while reducing resource consumption and carbon emissions. This type of packaging must meet logistics requirements such as full-process temperature control reliability (such as 2-8°C or -18°C range), mechanical strength, and stacking efficiency, and implement low-carbon management throughout the entire life cycle from design, production, use to end-of-life recycling or degradation. It is widely used in pharmaceutical cold chains, fresh food e-commerce, and high-end industrial product transportation. It is a key carrier of circular economy and green logistics, and complies with global ESG (environmental, social, and governance) standards and plastic reduction policy guidelines.

The global Sustainable Cold Chain Packaging market size was estimated at USD 387.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.60% during the forecast period.
