Abstracts

Sustainable Succinic Acid refers to bio-based succinic acid. Bio-based Succinic acid is Succinic acid ($C_4H_6O_4$) that is derived from renewable biological sources, such as plants, algae, or microorganisms, rather than from fossil fuel-based (petrochemical) sources. It is produced using biotechnological processes, primarily fermentation, where renewable feedstocks like sugarcane, corn, or biomass are converted into Succinic acid through the action of specific microorganisms (such as bacteria or fungi). This process offers a more sustainable and environmentally friendly alternative to traditional methods, which rely on petroleum-based feedstocks. Bio-based Succinic acid has the same chemical structure and properties as its petrochemical counterpart but is considered more eco-friendly because it is derived from renewable resources, thereby contributing to a reduction in carbon emissions and supporting the transition to a circular economy.

Sustainability and Green Chemistry: As industries and consumers increasingly prioritize environmental concerns, the demand for bio-based, renewable chemicals, including Succinic acid, is on the rise. Bio-based Succinic acid reduces reliance on fossil fuels and helps lower greenhouse gas emissions, which is a key selling point in the transition toward sustainability.

Rise of Bioplastics: Bio-based Succinic acid is a key feedstock in the production of biodegradable plastics (such as polybutylene succinate, or PBS), which are gaining popularity as alternatives to traditional, petroleum-based plastics. The growing environmental concerns over plastic waste are a major driver behind this demand.

Government Regulations and Incentives: Governments worldwide are implementing policies and regulations to support the use of renewable chemicals and bio-based materials. Subsidies, grants, and tax incentives for companies developing bio-based alternatives encourage the growth of the bio-based Succinic acid market.

Consumer Demand for Eco-friendly Products: There is an increasing consumer preference for products made from sustainable, bio-based materials, including plastics, pharmaceuticals, and cosmetics, which drives the demand for bio-based Succinic

acid. The core manufacturers of sustainable Succinic acid in the world include LCY Biosciences (BioAmber), Reverdia, Nippon Shokubai, Shandong Feiyang, etc. The top five manufacturers account for about 70% of the global market share.

The global Sustainable Succinic Acid market size was estimated at USD 66.5 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 9.40% during the forecast period.
