Abstracts

Sustainable Underwear refers to underwear products that minimize the impact on the environment throughout the entire process of design, production, use and disposal. Sustainable underwear is usually made of natural, renewable or recycled materials, such as organic cotton, bamboo fiber, recycled polyester fiber, etc. These materials are not only environmentally friendly, but also reduce potential harm to the human body. Sustainable Underwear emphasizes the environmental friendliness, durability and sustainability of underwear, aiming to achieve harmonious coexistence between the underwear industry and the environment. Sustainable Underwear represents the trend of the underwear industry towards green, low-carbon and environmentally friendly development, and is one of the important development directions of the future underwear market.

Driving factors

Enhanced environmental awareness: With the improvement of global environmental awareness, consumers pay more and more attention to the environmental attributes of products. Sustainable underwear, as part of environmentally friendly fashion, meets consumers' pursuit of environmental protection and healthy life.

Technological innovation and material innovation: The continuous emergence of new materials and new technologies, such as the development and application of environmentally friendly fabrics such as organic cotton, bamboo fiber, and recycled fiber, provides more options for the production of sustainable underwear. At the same time, the development of intelligent textile technology has also promoted the innovation of underwear design and manufacturing.

Changes in consumer demand: Modern consumers' demand for underwear is not limited to comfort and fashion, but more focused on health, environmental protection and personalization. Sustainable underwear just caters to this change in demand and provides product options that meet consumer expectations.

Hindering factors

High production costs: In the production process of sustainable underwear, environmentally friendly fabrics and processes are required, which usually leads to higher production costs. High costs may limit the

popularization and promotion of sustainable underwear. Lack of consumer awareness: Although sustainable underwear is gradually increasing in the market, some consumers still lack awareness of this concept. Lack of sufficient understanding and trust may affect consumers' purchasing decisions. Fierce market competition: The underwear market is highly competitive and there are many brands. While pursuing sustainable development, the brand also needs to face competitive pressure from traditional underwear brands, which may increase the difficulty of market promotion.

The global Sustainable Underwear market size was estimated at USD 102.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.80% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global Sustainable Underwear market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights. It examines market size, competitive landscape, emerging development trends, niche segments, key drivers and challenges, as well as conducts SWOT and value chain analyses.

The insights provided enable readers to understand the competitive dynamics within the industry and formulate effective strategies to enhance profitability and market positioning. Additionally, the report presents a clear framework for evaluating the current status and future outlook of business organizations operating in this sector.

A significant focus of this report lies in the competitive landscape of the global Sustainable Underwear market. It offers detailed profiles of major players, including their market shares, performance metrics, product portfolios, and operational status. This enables stakeholders to identify leading competitors and gain a nuanced understanding of market rivalry and structure.

In summary, this report serves as an essential resource for industry participants, investors, researchers, consultants, and business strategists, as well as anyone planning to enter or expand their presence in the Sustainable Underwear market.

Global Sustainable Underwear Market: Market Segmentation Analysis

This research report provides a detailed segmentation of the market by region (country), key manufacturers, product type, and application. Market segmentation divides the overall market into distinct subsets based on factors such as product categories, end-user industries, geographic locations, and other relevant criteria.

A clear understanding of these market segments enables decision-makers to tailor their product development, sales, and marketing strategies more effectively to meet the unique needs of each segment. Leveraging market segmentation insights can significantly enhance targeted approaches, optimize resource allocation, and accelerate product innovation cycles by aligning offerings with the specific demands of diverse customer groups.
