Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Sustained-release Enteric Softgel Capsules competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Sustained-release Enteric Softgel Capsules are advanced oral drug delivery systems designed to combine controlled-release kinetics with targeted intestinal protection. These capsules utilize a pH-sensitive enteric coating to resist gastric acid degradation, ensuring drug release primarily in the small intestine or colon, while their softgel matrix incorporates sustained-release excipients (e.g., hydrophilic polymers or lipid-based carriers) to prolong drug dissolution over an extended period. This dual-function design enhances bioavailability, minimizes gastrointestinal irritation, and optimizes therapeutic efficacy for drugs sensitive to gastric pH, requiring prolonged action, or targeting specific intestinal absorption sites.

The global Sustained-release Enteric Softgel Capsules market size was estimated at USD 828.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.50% during the forecast period.
