Abstracts

Suture anchor devices are specialized medical implants used primarily in orthopedic and sports medicine procedures to reattach soft tissues, such as tendons and ligaments, to bone. These devices, typically made from biocompatible materials like metal alloys, bioabsorbable polymers, or PEEK, feature an anchor body that is inserted into a pre-drilled hole in the bone, along with attached sutures that are threaded through the soft tissue to secure it in place. They are designed to provide strong, stable fixation with minimal bone disruption, facilitating healing and restoring function in procedures like rotator cuff repairs, ACL reconstructions, and labral repairs.

The global Suture Anchor Devices market size was estimated at USD 1324.65 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.50% during the forecast period.
