Abstracts

Suture screwed anchors are specialized orthopedic medical devices designed for soft tissue-to-bone fixation in minimally invasive surgical procedures, particularly arthroscopic surgeries involving the shoulder, knee, hip, and other joints; these anchors consist of a threaded, screw-like body, typically made from biocompatible materials such as PEEK, titanium, or bioabsorbable polymers, which is inserted into a pre-drilled bone tunnel to provide stable fixation, while attached sutures are used to reattach tendons, ligaments, or labral tissues to the bone, promoting healing and restoring joint function through their unique combination of mechanical stability, ease of insertion, and compatibility with arthroscopic techniques.

The global Suture Screwed Anchor market size was estimated at USD 450.25 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.50% during the forecast period.
