Abstracts

Suture thread with needle is a type of suture material commonly used in surgical procedures, consisting of a suture thread and a needle that is pre-attached to the thread. The suture thread is typically made of biocompatible materials such as nylon, polyester, or polypropylene, designed to securely close wounds and promote healing. The pre-attached needle design eliminates the need for separate threading, improving surgical efficiency and precision. Depending on the specific needs of the surgery, suture thread with needle is available in various needle types, thread materials, and lengths, making it suitable for suturing soft tissues, skin, muscles, and blood vessels. Its advantages include ease of use, quick application, and reduced risk of infection during the surgical process.
