Abstracts

Swim tracking goggles are specialized aquatic wearables that integrate advanced sensor technology—typically including accelerometers, gyroscopes, and sometimes optical or pressure sensors—to monitor and record a swimmer's performance metrics in real-time, such as lap count, stroke type and rate, distance swum, pace, calorie expenditure, and even turn efficiency; these devices often feature wireless connectivity (e.g., Bluetooth) to sync data with companion smartphone apps or web platforms, enabling detailed post-swim analysis, progress tracking, and sometimes social sharing or coaching integration, all while maintaining the primary function of traditional swim goggles through watertight construction, anti-fog coatings, and adjustable straps for comfort and usability during intense training or recreational swimming.
