Abstracts

The market for Swine Streptococcus Vaccine encompasses products specifically developed to protect pigs against infections caused by *Streptococcus suis*, a major bacterial pathogen responsible for significant economic losses in the swine industry through conditions such as meningitis, septicemia, arthritis, and sudden death, particularly in weaned piglets. These vaccines, available in various forms including inactivated, live attenuated, and subunit types, are designed to induce immunity against prevalent serotypes, with efficacy and cross-protection being critical factors influencing adoption. Demand is driven by the need to reduce mortality rates, minimize antibiotic use amid growing antimicrobial resistance concerns, and improve overall herd health and productivity, making it an essential component of modern swine health management programs, especially in regions with high-density pig farming.

The global Swine Streptococcus Vaccine market size was estimated at USD 1200.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.50% during the forecast period.
