## Abstracts

The Swiss type automatic lathe is a machine tool designed for efficient machining of high-precision, small-diameter parts. It was originally developed to meet the demand for precision parts in the watchmaking industry, but is now widely used in medical devices, electronic components, automotive parts, aerospace and other fields. The characteristic of this lathe is that the workpiece remains fixed and moves along the main axis during the machining process, and the tool cuts around the workpiece. The Swiss type automatic lathe uses a guide sleeve to support the workpiece, ensuring extremely high rigidity and stability, and can complete multiple processes in one clamping, ensuring high-precision machining of tiny parts.
