Report Overview

Switchgear is an are important transmission and distribution (TandD) equipment used for protection of the network. It can be of different types, based on the insulation type and the operating voltage level. In the late 1990s, ABB introduced a unique technology where switchgear makes use of both air and sulfur hexafluoride (SF6) gas insulation in its operation, known as the hybrid switchgear. Its primary characteristics involved: Gas-insulation technology that aids in arc-quenching, and Air-insulation technology that is used to insulate the bus bars that are connected to the network.

The increasing global electricity generation is one of the primary growth factors for the switchgear contractor and relay market. With the improving living standards of people, the demand for home appliances and electronic devices is increasing in both the residential and commercial spaces.
