Abstracts

A synchronous chip sealer is a specialized road maintenance and construction machine designed for the precise application of a uniform layer of asphalt emulsion and aggregate chips onto road surfaces in a single, integrated process. It operates through synchronized systems that control the spray bar for emulsion distribution and the chip spreader for aggregate deployment, ensuring optimal adhesion, coverage, and compaction efficiency. This equipment is critical for surface treatments like chip sealing, which enhance road durability, skid resistance, and waterproofing, while extending pavement life at a lower cost compared to full-depth repairs.
