## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Synchronous MOSFET Drivers competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global synchronous MOSFET driver production will reach 9.4598 million units, with an average selling price of \$10.27 per unit. A synchronous MOSFET driver is a power electronic control circuit designed specifically for synchronous buck topologies. Its core function is to precisely control the gate drive voltage/current of the high-side and low-side MOSFETs to achieve complementary conduction and cutoff during the switching cycle. It also incorporates a built-in dead-time control module to prevent shoot-through current risks. This driver must meet the requirements of high-frequency switching, low switching losses, and high dynamic response, and integrate protection mechanisms such as undervoltage lockout (UVLO), overcurrent protection (OCP), and thermal shutdown (TSD) to meet the stringent efficiency requirements of synchronous rectification technology. The upstream of synchronous MOSFET drivers is semiconductor materials and core components (silicon-based/compound semiconductor wafers, wide bandgap materials, gate driver chips, protection circuit components), represented by SUMCO (silicon wafers), Wolfspeed (SiC materials), Rohm Semiconductor (GaN devices), Infineon (driver ICs), ON Semiconductor (power modules), TDK (magnetic components), etc.; the midstream is driver design, manufacturing and module packaging (Texas Instruments, STMicroelectronics, Silan Microelectronics, Changdian Technology); the downstream is new energy vehicles (OBC/DCDC converters), industrial power supplies (servo drives, UPS), home appliance frequency conversion (air conditioner/refrigerator compressors), consumer electronics (fast charging/adapters), communication equipment (5G base station PA power supplies) and data centers (high-efficiency power modules).

The global Synchronous MOSFET Drivers market size was estimated at USD 97.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.20% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global Synchronous MOSFET Drivers market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights.
