Abstracts

A synthetic cooling agent is a chemical compound designed to create a cooling sensation when applied to the skin, mucous membranes, or consumed orally. Unlike natural menthol, which is commonly associated with cooling effects, synthetic cooling agents are artificially produced and offer greater flexibility in sensory characteristics, intensity, and duration. They work by activating cold-sensitive TRPM8 receptors in the body, mimicking the sensation of cold without actual temperature changes. Synthetic cooling agents are widely used in products like food and beverages, oral care (toothpaste and mouthwash), personal care (lotions and creams), pharmaceuticals, and even industrial applications where cooling sensations are desirable. Popular examples include compounds like WS-23, WS-3, and WS-12.

The global Synthetic Cooling Agent market size was estimated at USD 412.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.20% during the forecast period.
