Report Overview

Synthetic Dyes are the colouring material that colour commodities of our day to day use. Hardly there is any industry where dyes are not used commercially. From leather to jazzy t-shirt, everywhere there is application of dye. Synthetic pigments are colored, black, white or fluorescent particulate organic solids which usually are insoluble in, and essentially physically and chemically unaffected by, the vehicle or substrate in which they are incorporated. They alter appearance by selective absorption and/or by scattering of light. Synthetic pigments are usually dispersed in vehicles or substrates for application, as for instance in the manufacture of inks, paints, plastics or other polymeric materials. Synthetic pigments retain a crystal or particulate structure throughout the coloration process.
