Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Synthetic Fiber Grade Rutile Titanium Dioxide competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. A type of titanium dioxide (TiO₂) with a rutile crystal structure, specifically processed for use in the synthetic fiber industry. Rutile titanium dioxide has higher opacity, excellent weather resistance, and better dispersibility compared to other forms of titanium dioxide. It is widely used in the production of synthetic fibers and textiles to improve whiteness, enhance UV resistance, and provide a smooth matte finish. This form of titanium dioxide is also valued for its durability and ability to reduce unwanted gloss in fiber products. Synthetic fiber grade anatase titanium dioxide is widely used as a delustering agent in polyester fiber production, including staple fibers, filaments, and industrial yarns. China dominates both the consumption and production of this grade, accounting for over 70% of global demand. The sustained growth of polyester applications in apparel, home textiles, and technical fabrics continues to drive demand. Due to the high technical requirements—such as controlled particle size, excellent dispersion, and thermal stability—the market is relatively concentrated, with strong barriers to entry. Leading domestic producers like CNNC Hua Yuan, LB Group, and Annada hold significant market share, although certain high-end fiber-grade TiO₂ products still depend on imports. Stricter environmental regulations are accelerating process upgrades, shifting the competitive landscape from capacity race to quality-driven differentiation and sustainability.

The global Synthetic Fiber Grade Rutile Titanium Dioxide market size was estimated at USD 1475.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.80% during the forecast period.
