Abstracts

Synthetic fiber slings can be made from polyester, nylon, or high-performance materials and are lightweight, easy to rig, and extremely flexible. Besides, synthetic Fiber Sling has the advantages of light portability, easy maintenance and good chemical resistance. There are two types of synthetic fiber slings: web Slings and round slings. Web Slings are flexible, lightweight, and have a flat construction, normally with eyes at both ends. The flexibility of the sling helps to reduce shock loading effects. It is also important to note that the load-bearing yarns of the sling come in direct contact with the load. Round slings, however, are a continuous loop of yarn covered by a woven tubular casing. This casing comes in direct contact with the load, which helps to protect the load-bearing yarns inside.

The global Synthetic Fiber Sling market size was estimated at USD 351.63 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 0.02% during the forecast period.
