Abstracts

Synthetic fibers are referred to man-made materials, which are produced with the help of chemicals having superior properties compared to natural fibers. Synthetic fibers are manufactured through polymerization of a variety of chemical substances. These fibers are more light-weight, stain-resistant, easy & convenient to dye, and durable. On the back of their favorable properties, synthetic fibers are widely employed for various applications in the fashion industry. Consumers highly prefer characteristics such as durability, better stain resistance, softness, and elasticity in their fiber uses; and manufacturers' ability to provide all such properties at lower costs is one of the key driving factors for the growth of the global synthetic fiber market. Furthermore, changing fashion trends are also expected to have perceptible effects on the global synthetic fiber market. The lower cost of synthetic fibers as compared to natural fibers also encourages their use among consumers. Furthermore, weak supply of natural fibers such as cotton is another factor, expected to drive the global synthetic fiber market over the forecast period.

The global Synthetic Fibers market size was estimated at USD 125670.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.30% during the forecast period.
