## Abstracts

Hydrotalcite, is a Layered Double Hydroxide whose name is derived from its resemblance with talc and its high water content. Layered double hydroxides (LDH) comprise an unusual class of layered materials with positively charged hydroxide layers and charge balancing, mobile anions located in the interlayer region. This structure gives these material anion-exchange properties. The natural form of hydrotalcite is mined in small quantities in the Snarum area of Norway and the Ural area of Benelux. Carl Christian Hochstetter (1842) was the first to report about hydrotalcite, which was attached firmly to a schist. He described a white material with a pearl like luster, with the formula  $Mg_6Al_2(OH)_{16}CO_3 \cdot 4H_2O$ . Hydrotalcites are mainly used in PVC and CPVC, and Polyolefins. Polyolefins are utilized in a wide range of applications, including packaging, cable insulation, clothing, and medical products. However, before polyolefin materials from the reactor can be used for their intended purpose, they must undergo several processing steps. Renowned for their pivotal role and performance as co-stabilizers in PVC and CPVC, Hydrotalcites play a crucial role in capturing the chlorine released during the thermal degradation process, thus significantly enhancing heat stability. Their exceptional purity and anion exchange mechanism make them highly effective acid scavengers, solidifying their status as unparalleled PVC and CPVC stabilizers. The top players are Kyowa Chemical (Kisuma Chemicals), Clariant (S?d-Chemie), Sakai Chemical Industry, Doobon, Sinwon Chemical, Sasol Germany, Kanggaote, GCH Technology Co., Ltd., BELIKE Chemical and SAEKYUNG (Hengshui) New Materials. Kyowa Chemical/Kisuma Chemicals is the largest producer of Hydrotalcite, followed by Clariant (S?d-Chemie), Doobon, and Sakai Chemical Industry. The global top 3 players hold a share over 65% in 2021. In terms of product type, Mg-Al Hydrotalcite is the largest segment, with a share about 85%, while Mg-Al-Zn Hydrotalcite will grow faster in next few years. In terms of applications, PVC stabilizer is the largest application, holds a share over 75 percent.

The global Synthetic Hydrotalcite market size was estimated at USD 236.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.60% during the forecast period.
