Abstracts

Synthetic latex adhesive is a type of adhesive based on synthetic latex polymers. It is made by dispersing synthetic rubber or other polymer particles in an aqueous medium to form a stable latex. The polymers used in synthetic latex adhesives often include styrene - butadiene rubber (SBR), acrylic polymers, and vinyl acetate polymers. These adhesives offer several advantages, such as good adhesion to a variety of substrates including paper, cardboard, wood, and some plastics. They have excellent flexibility, which allows the bonded materials to withstand some degree of deformation without the adhesive failing. Synthetic latex adhesives also have good resistance to water, chemicals, and aging. They are widely used in the packaging industry for bonding cardboard and paper products, in the woodworking industry for assembling furniture and joinery, and in the textile industry for coating and laminating fabrics.

The global Synthetic Latex Adhesive market size was estimated at USD 27950.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 2.40% during the forecast period.
