Abstracts

Synthetic liquid fuel is a synthetic liquid fuel produced by converting a gaseous or solid feedstock into a liquid fuel, usually through a chemical or catalytic reaction. These fuels can be used as alternatives to traditional petroleum fuels such as diesel or gasoline to meet transportation and energy needs. The production process of synthetic liquid fuels typically includes the following steps: gasification, catalytic synthesis, refining and upgrading. The synthetic liquid fuel market includes multiple segments such as coal-based liquid fuel and biomass liquid fuel. From the perspective of market size and growth trends, the synthetic liquid fuel market is constantly expanding. As global energy demand continues to grow and environmental protection becomes increasingly concerned, synthetic liquid fuels have received increasing attention as a clean, renewable form of energy. Especially in some large energy-consuming countries, the demand for synthetic liquid fuels has grown significantly. In addition, in the field of coal-to-liquid fuels, with the continuous innovation and advancement of technology, the production efficiency and quality of coal-to-liquid fuels have been significantly improved, and the production costs have gradually been reduced. In the field of biomass liquid fuels, the development of new biomass conversion technologies and catalysts has improved the output and quality of biomass liquid fuels, while also reducing production costs. Overall, the synthetic liquid fuel market has broad development prospects and huge potential.

The global Synthetic Liquid Fuel market size was estimated at USD 3545.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.70% during the forecast period.
