Abstracts

Synthetic menthol crystals are artificially produced crystalline forms of menthol, a cyclic monoterpene alcohol known for its characteristic cooling and minty aroma, manufactured through chemical synthesis rather than extraction from natural sources like peppermint or cornmint oil. These crystals serve as a key ingredient across multiple industries, including pharmaceuticals (in cough drops, topical analgesics, and oral care products), food and beverages (as a flavoring agent in confectionery, chewing gum, and beverages), tobacco (to enhance and refresh cigarette and smokeless tobacco products), and personal care (in cosmetics, fragrances, and toiletries such as lip balms and lotions). The synthetic production method ensures consistency in purity, supply stability, and often cost-effectiveness compared to natural alternatives, while also appealing to markets requiring vegan, allergen-free, or sustainably sourced ingredients due to controlled manufacturing processes free from agricultural variability.

The global Synthetic Menthol Crystals market size was estimated at USD 375.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.85% during the forecast period.
