Report Overview

Synthetic rutile is a product that is obtained from ilmenite, a naturally occurring complex oxide of iron. Synthetic rutile can be produced with varying degrees of purity and the variation in quantity and type of impurity depends on the source of ilmenite and the extraction process. It has a high titanium dioxide content with low levels of contaminants. The doping method allows the manufacturers to produce synthetic rutile in different colours as pure synthetic rutile is almost colourless. Synthetic rutile is used as a feedstock for the production of titanium metal and titanium dioxide, which are used in various industries such as aerospace, automotive, paints, plastics, and paper.
