Abstracts

Synthetic second-generation biofuels, also known as advanced biofuels, represent a major step forward in the effort to create more sustainable and environmentally friendly fuel options. Unlike first-generation biofuels, which are derived directly from food crops like corn and sugarcane, second-generation biofuels are made from non-food biomass sources, including lignocellulosic biomass, non-edible parts of plants, agricultural residues, and woody crops. This distinction is crucial as it helps avoid competition with food supply and minimizes the impact on food prices.

The global Synthetic Second Generation Biofuels market size was estimated at USD 1850.42 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.75% during the forecast period.
