Report Overview

Synthetic surgical gloves are a type of medical gloves made from synthetic materials such as nitrile, neoprene, or polyisoprene. These gloves are designed to provide protection for healthcare professionals during surgical procedures by offering a barrier against contaminants and reducing the risk of infection. Synthetic surgical gloves are known for their durability, flexibility, and resistance to punctures, making them a popular choice in the healthcare industry.

The market for synthetic surgical gloves is experiencing steady growth due to several factors. One of the key market trends driving this growth is the increasing awareness among healthcare providers about the importance of infection control and safety measures in healthcare settings.
