Abstracts

Syrup colour precipitants are a class of chemical reagents specifically designed for treating unwanted color components in syrup. During syrup production and processing, due to the introduction of raw materials, chemical reactions, or changes in storage conditions, syrup may develop undesirable color substances that affect not only its appearance but also its stability and consumer acceptance. Syrup color precipitants react chemically with these color substances, converting them into insoluble precipitates that can be removed from the syrup by filtration or other physical methods. Using syrup color precipitants can effectively improve syrup color, enhance product transparency and brightness, while maintaining syrup flavor and nutritional value. This is important for enhancing syrup products' market competitiveness.

The global Syrup Colour Precipitants market size was estimated at USD 671.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.80% during the forecast period.
