Abstracts

The System Electronic Navigational Chart (SENC) is the core data carrier of the Electronic Chart Display and Information System (ECDIS). It is built according to the International Hydrographic Organization (IHO) S-57 standard and integrates marine geographic information, navigation obstacles, water depth, navigation marks and other elements through a vector data model to form a structured database. Its data structure contains geometric elements (points, lines, surfaces) and attribute elements (name, type, depth value, etc.), supports spatial query and dynamic rendering, meets the International Maritime Organization (IMO) Resolution A.817 (19) performance standard, and ensures compatibility and display consistency with ECDIS hardware. SENC obtains original Electronic Navigational Chart (ENC) data through official channels. After format conversion and system adaptation, it provides real-time positioning, route planning, danger warning and other functions for ship navigation, and supports user-defined marks (such as prohibited areas, temporary routes) and dynamic data overlay (such as tides and weather information). Its data update mechanism strictly follows the IHO S-63 encryption standard to ensure the security and timeliness of navigation information, and is the key technical foundation for modern ships to achieve digital navigation and safe navigation.

The global System Electronic Navigational Chart?SENC? market size was estimated at USD 390.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.90% during the forecast period.
