Report Overview

A system in package (SiP) or system-in-a-package is a number of integrated circuits enclosed in a single chip carrier package. ... SiP dies can be stacked vertically or tiled horizontally, unlike less dense multi-chip modules, which placed dies horizontally on a carrier.

Market demand for high performance, small size, low power and low cost cannot be met through conventional packaging and interconnect technology. Conventional technology is unable to address limitations such as density; bandwidth and signal integrity and thermal management posed by interconnect technology. System in Package (SiP) technology helps to address these limitations effectively to a certain extent.
