Systematic reviews are most commonly used in medical and public health research, but they can also be found in other disciplines. Systematic reviews typically answer their research question by synthesizing all available evidence and evaluating the quality of the evidence. The synthesis can be narrative (qualitative), quantitative, or both.

Systematic reviews usually involve working with large numbers of references and need to carefully keep track of the references. A range of software is available for systematic reviews, especially to support screening and data extraction but also for other stages of the process. Specialist systematic review software may also contain functions for machine learning, data-analysis, visualisation and reporting tools. It is also possible to use reference management software for some of the stages of reviewing. Although reference management software are not bespoke review management tools, they can be used for systematic reviews. Global key players of Systematic Review Management Software include Clarivate (EndNote, RefWorks), Elsevier (Mendeley), Digital Science (ReadCube, Papers), Chegg (EasyBib), etc. The top four players hold a share over 76%.
