## Abstracts

A T-BOX battery is used to power the telematics system in vehicles or equipment when the main power source is unavailable or disconnected. The telematics system, which typically includes GPS tracking, communication modules, and sensors, collects and transmits data like location, speed, and vehicle diagnostics. The backup battery ensures that this system remains functional during power failures, theft attempts (where the main battery might be disabled), or emergencies. Not all telematics boxes have an eCall function. While telematics boxes share some common features like GPS tracking, vehicle diagnostics, and driving behavior monitoring, the eCall function is a specialized feature typically found in advanced telematics systems or devices designed specifically for emergency services. The report research telematics backup battery (include eCall market). The rise of connected and autonomous vehicles is increasing the integration of advanced telematics and safety features, including eCall systems. This trend necessitates the incorporation of reliable power sources, thus driving demand for backup batteries. As consumers become more aware of safety features and their benefits, the preference for vehicles equipped with effective T-BOX and consequently, backup solutions rises. As automotive markets expand in emerging economies, the implementation of safety technologies, including T-BOX, is gaining traction, thus driving demand for related backup battery solutions. The rise of electric and hybrid vehicles is driving the demand for robust backup power systems for T-BOX. These vehicles often rely on more complex electrical systems, necessitating efficient backup solutions to ensure emergency features remain functional.

The global T-BOX Battery market size was estimated at USD 84.9 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.30% during the forecast period.
