Abstracts

T cell transfer therapy, also known as adoptive cell therapy, is a form of immunotherapy that involves extracting a patient's T cells, modifying and expanding them ex vivo to enhance their cancer-targeting capabilities, and reinfusing them into the patient to mount a robust and targeted immune response against tumors, with chimeric antigen receptor (CAR) T cell therapy being the most prominent and clinically advanced subtype. The global market for T cell transfer therapy is predominantly driven by the success and commercialization of CAR-T therapies for hematologic malignancies such as B-cell acute lymphoblastic leukemia and diffuse large B-cell lymphoma, with products like Kymriah (tisagenlecleucel) and Yescarta (axicabtagene ciloleucel) leading revenue generation. Despite high treatment costs—often exceeding \$350,000 per patient—increasing insurance coverage, accelerated regulatory approvals, and a growing pipeline targeting solid tumors are expanding market access and driving adoption. Key challenges include managing severe immune-related adverse events, such as cytokine release syndrome and neurotoxicity, scaling manufacturing processes to meet demand, and addressing the limited efficacy observed in solid tumors to date. Geographically, North America holds the largest market share due to favorable reimbursement policies and a high concentration of clinical trials, though Asia-Pacific is emerging as a high-growth region supported by increasing investments in cell therapy infrastructure and a rising cancer burden. The competitive landscape is characterized by both pharmaceutical giants and specialized biotech firms actively engaging in research collaborations, licensing agreements, and M&A activities to advance next-generation therapies, including allogeneic “off-the-shelf” CAR-T products that aim to overcome autologous therapy limitations.

The global T Cell Transfer Therapy market size was estimated at USD 1250.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 22.50%

during the forecast period.
