Abstracts

The T-shaped intrauterine device (IUD) is a long-acting reversible contraceptive (LARC) device characterized by its distinct T-shaped frame, typically made of flexible plastic with a combination of hormonal or copper components designed to prevent pregnancy. Hormonal variants release progestin to thicken cervical mucus, inhibit sperm motility, and suppress endometrial growth, while copper IUDs create an inflammatory reaction toxic to sperm and eggs. Known for high efficacy rates exceeding 99%, T-shaped IUDs are inserted into the uterine cavity by healthcare providers and can remain effective for 3 to 10 years depending on the type, offering a low-maintenance, non-daily birth control option favored for its reliability and convenience.

The global T Shaped Intrauterine Device market size was estimated at USD 1245.6 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.85% during the forecast period.
