Report Overview

Tauroursodeoxycholic acid (TUDCA) is a bile acid derivative formed by the conjugation of taurine with ursodeoxycholic acid (UDCA), known for its hepatoprotective, anti-inflammatory, and neuroprotective properties. It is widely used in the treatment of liver diseases such as primary biliary cholangitis, non-alcoholic fatty liver disease (NAFLD), and cholestasis, as well as being explored for potential applications in neurodegenerative disorders like Alzheimer's and Parkinson's disease. The market for TUDCA is driven by increasing liver disease prevalence, rising demand for liver health supplements, and growing research into its therapeutic benefits beyond hepatology. Key players include pharmaceutical companies, nutraceutical brands, and research institutions, with North America and Europe leading in consumption due to high healthcare expenditure and awareness. However, regulatory scrutiny, production costs, and limited clinical trials for non-liver indications pose challenges. The market is poised for expansion, supported by trends in preventive healthcare and the rising popularity of bile acid-based therapies.

The global T UDCA market size was estimated at USD 92.2 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 10.10% during the forecast period.
