Abstracts

The battery tab cutting machine is a key equipment in the lithium battery manufacturing process, mainly used to cut the positive and negative tabs of the battery. As the connecting part of the lithium battery electrode, the quality and shape of the tab are crucial to the performance and reliability of the battery. The working principle of the battery tab cutting machine mainly includes three steps: material positioning, cutting and waste disposal. The equipment locates the tab material through high-precision sensors to ensure the accuracy of the cutting position. Subsequently, the cutting mechanism cuts according to the preset parameters to complete the cutting of the tab. Finally, the waste disposal system collects and processes the waste generated by cutting to keep the production environment clean.

The global Tab Cutting Equipment market size was estimated at USD 167.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 32.30% during the forecast period.
