Abstracts

The maximum current transmission distance of Tabless design batteries is the height of the electrode rather than the length. The electrode height is usually 5%-20% of the electrode length. Therefore, the resistance is reduced by 5-20 times compared to a single-pole ear, thereby improving the transmission efficiency and greatly improving the battery's rate performance.

The global Tabless Design Battery market size was estimated at USD 154.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 10.60% during the forecast period.
