Report Overview

A tablet is a mobile computer device that is larger than a smartphone or a phablet and smaller than a laptop. Its screen size is generally larger than seven inches. It has a touch screen that can be controlled with the touch of a stylus or a finger. It does not require a keyboard or a mouse and offers greater mobility than a normal laptop. Tablets have long battery life of up to 10 hours. They are lightweight and offer faster navigation through a touch screen, stylus, or finger touch than a keyboard or a mouse. The flat design of a tablet makes it easier to work on any surface and to display presentations. Around 164 million units of tablets were shipped worldwide in 2017, with shipments peaking at just under 50 million units in the final quarter of the year. Of these shipments throughout the year, 47 million were shipped in North America. Shipments in this region are expected, however, to decrease in the coming years with the number set to reach just 44 million units by 2020.
