Report Overview

The food and beverage industry is focusing on replacing sugar with sugar substitutes. This is creating a cost-cutting advantage for production. This is because, when compared with sugar, these substitutes are required in lesser quantities for the same sweet taste. This has accelerated the demand for sweeteners. Low-intensity sweeteners (LIS) can be consumed by people with diabetes. The lower calorie value of LIS controls insulin secretion, which in turn controls the blood sugar level. The demand for LIS is increasing in North America and is driving the sales of sweeteners.

The growing cases of diabetes and obesity across the globe is one of the primary growth factors for this market. Obesity and diabetes are lifestyle disorders that are predominant in a large segment of the world's population. These disorders lead to other health issues, including heart ailments, respiratory disorders, and anxiety. This high rate of obesity and diabetes will lead to a shift in consumer preference for sachet sweeteners, subsequently fueling market growth.
