Abstracts

Tabletop pulse oximeters are non-invasive medical devices designed for continuous or spot-check monitoring of blood oxygen saturation (SpO₂) and pulse rate, primarily used in clinical settings such as hospitals, clinics, and long-term care facilities. These stationary devices typically feature larger displays, enhanced durability, and advanced functionalities such as data storage, connectivity options (e.g., USB, Bluetooth, or Ethernet for integration with hospital information systems), alarms for abnormal readings, and compatibility with various patient demographics making them suitable for professional healthcare environments where reliability, accuracy, and continuous monitoring are critical. Unlike portable or handheld models, tabletop versions are often AC-powered and may include modular components like external probes or sensors, catering to sustained use across multiple patients with minimal downtime.

The global Tabletop Pulse Oximeter market size was estimated at USD 325.6 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 8.75% during the forecast period.
