Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Tackifying Resin 203 competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Tackifying Resin 203 is a thermoplastic resin derived from the polycondensation of tert-octylphenol and formaldehyde. Its molecular formula is $C_{20}H_{22}O$, and it appears as pale yellow to light brown granules or flakes. Its core properties include a low softening point and high polarity compatibility (suitable for natural rubber and synthetic rubbers such as styrene-butadiene, butyl, and EPDM). By enhancing the self-adhesive properties of the rubber compound, it addresses delamination issues in semi-finished products and plays a particularly important role in the green tire molding of all-steel radial tires. Global production in 2024 is expected to be approximately 123,000 tons, with an average selling price of US\$1,790 per ton.

The global Tackifying Resin 203 market size was estimated at USD 220.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.90% during the forecast period.
