Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Tacky Grease competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, the global sales volume of Tacky Grease (viscous grease) will be approximately 126,000 tons, with an average unit price of approximately US\$1450/ton. It is widely used for long-term lubrication protection of heavy-duty equipment and harsh working conditions. Tacky Grease is a grease designed specifically to improve adhesion and anti-swing ability. It is usually composed of base oil, thickener (such as lithium, calcium or aluminum base) and added high-adhesion polymers (such as polyisobutylene or polyolefin). Its unique "drawing" properties and excellent water scouring stability enable it to remain on the metal surface for a long time in humid, high-shear, and vibrating environments, forming a layer of anti-wear and anti-corrosion lubricating film. Tacky Grease is commonly used in chains, bearings, slide rails, gears, and open-air equipment. It plays an irreplaceable role in agricultural machinery, mining equipment, maritime facilities, and heavy industrial machinery.

The global Tacky Grease market size was estimated at USD 183.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.30% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global Tacky Grease market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights.
