Report Overview

Operating in the band between 30 and 300 MHz, VHF radios are typically smaller, lighter and more portable than their HF counterparts. This makes them particularly useful for smaller units in the field communicating with one another. VHF waves travel across the Earth's surface and do not reflect off the ionosphere. As such, they are limited to line-of-sight (LOS) transmissions - the antennas of the transmitting and receiving radios must be able to 'see' one another. Given this limitation, VHF is generally limited to ranges of approximately 8 kilometres.

The global Tactical VHF Radio market size was estimated at USD 897 million in 2023 and is projected to reach USD 1528.38 million by 2032, exhibiting a CAGR of 6.10% during the forecast period.

North America Tactical VHF Radio market size was estimated at USD 258.81 million in 2023, at a CAGR of 5.23% during the forecast period of 2024 through 2032.
