Through-Air Drying (TAD) Technology is an advanced paper-drying process used primarily in the production of premium tissue and towel grades. Unlike conventional wet-press drying where the wet web is mechanically pressed against heated cylinders, TAD uses high-velocity hot air to remove moisture, yielding papers with much higher bulk, absorbency, and softness.

The global TAD Technology market size was estimated at USD 307.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.40% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global TAD Technology market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights. It examines market size, competitive landscape, emerging development trends, niche segments, key drivers and challenges, as well as conducts SWOT and value chain analyses.
