Abstracts

A tailgate detection solution refers to an integrated security system designed to prevent unauthorized access by detecting instances where an individual follows closely behind an authorized person through a controlled entry point, such as a door or turnstile. These solutions typically utilize a combination of sensors, cameras, and access control technologies to monitor and analyze movement patterns, distinguishing between legitimate single entries and potentially threatening tailgating or piggybacking events. Key components often include optical or infrared sensors, video analytics, and alarms or automated alerts that notify security personnel in real-time, thereby enhancing physical security protocols by addressing a common vulnerability in perimeter and interior access management.
