Abstracts

Tailored blanks are semi-finished parts, which are typically made from sheets with different alloys, thicknesses, coatings or material properties. After joining, these will be subjected to deep drawing or stamping. Tailored blanks were developed by ThyssenKrupp to make sheets that were wider than those made on available rolling mills of the time. These days, tailored blanks are used to make items such as door panels which are thick near the hinges and thin near the lock to withstand different types of loads or corrosion attacks. They are lighter and often cheaper than conventional sheets. Tailored Blanks are typically made from steel. Aluminium and dissimilar material tailored blanks are also available but less common. Global Tailored Blank key players include Baosteel, Arcelormittal, Shiloh, etc. Global top three manufacturers hold a share over 70%. Europe is the largest market, with a share about 55%, followed by Asia Pacific, and North America, both have a share about 35 percent. In terms of product, Steel Tailored Blank is the largest segment, with a share over 70%. And in terms of application, the largest application is Passenger Vehicle, followed by Commercial Vehicle.
